POLAND/Nuclear Physics - Cosmic Rays.

Abs Jour : Ref Zhur - Fizika, No 1, 1958, 572

Author : Zaivadski, A.

Inst : -

Title : Density Spectrum of Extensive Showers of Cosmic Rays at an Altitude of 230 Meters Above Sea Level.

Orig Pub : Bull. Acad. polon. sci. 1957, Cl. 3, 5, No 2, 147-153, XIV

Abstract : Experimental data show that the spectrum of extensive showers can be represented in the following differential form:  $N(\xi) d\xi = K \xi^{-(\sigma+1)} d\xi$ , where N is the number of showers with a density lying between  $\xi$  and  $\xi + d\xi$ , K is a constant, whose value depends on the depth of the point of observation in the atmosphere, and  $\xi$  varies slowly as a function of  $\xi$ . To determine the function  $\xi(\xi)$ , a hodoscope of three groups, containing each 18 Geiger-Muller counters, was used. 227, 712 individual.

"Ulceration of the Stomach and Duodenum in Dogs."

Warsaw-Lublin, Medycyna Weterynaryjna, Vol 17, No 1, Jan 69, pp 39-42.

Abstract: Review based on students' own study and search of the literature. Ulcers in dogs are rare and usually not the primary cause of death. Authors illustrate and describe anatomical and histological pathological changes which they found and discuss the associated phenomena. There are six references, of which three are Polish, two English, and one German.

"Adenocarcinome in the Lungs of a Cat."

Warsaw-Lublin, Medycyna Weterynaryjna, Vol 19, No 5, May 63, pp 249-250.

Abstract: Author reports a rare case of adenocarcinoma in the lungs of a 14-year old siamese cat, which has not previously been described in the literature available to him. He gives the anatomical pathological findings and dwells, in particular, on the histological ones, showing pictures of the growth foci and describing the involved changes in the lungs, vascular system, liver, and pancreas. Findings in the heart and kidneys seem to have been more connected with the age of the cat, and its brain was not affected. There are no references.

TITLE: The Main Trends of Development of the Soviet Chemical Industry During 1959 - 1965

PERIODICAL: Przemyśl Chemiczny, 1960, Vol. 39, No. 9, pp. 539 - 541

TEXT: The article reviews the intended expansion of the chemical industry in the USSR during the current 7-year plan. By 1965, the total annual output of the chemical industry will be increased threefold as compared with 1958. More than 140 new plants will be built, and over 130 existing plants expanded and modernized with a total capital investment of 100 to 105 billion rubels. The stress will be on the production of macromolecular compounds and their derivatives, polymers, plastics, synthetic fibers, and on chemicals for farming. The fertilizer production will reach 31 million tons by 1965 as compared with 10.6 million tons produced in 1958. Among others, the following plants will be built: several nitrogen plants in Central Asia, which will operate on natural gas; superphosphate plant in the Azerbaydzhanskaya SSR; potassium combine and a superphosphate plant in the Belorusskaya SSR; and a superphosphate plant in the Litovskaya SSR. There are 2 tables and 2 Soviet references.

Abstract : Data are given on the development of plastics production in large capitalistic countries for the years 1947-1956. It is noted that 60-70% of the total plastics production is used for industrial purposes, and 30-40% is employed for extensive everyday uses. At present, in Poland 600 tons of polyvinylchloride are manufactured yearly (in 1958 the starting of a new polyvinylchloride shop with a capacity of 4,000 tons is projected); the demand for polystyrene was met

"Perforating Eye Injuries and Their Late Consequences."

Budapest, Orvosi Hetilap, Vol 107, No 38, 18 Sep 66, pages 1801-1804.

Abstract: [Authors' Hungarian summary] Taken from the patient material of  
10 years, the later fate of 403 eyes with perforating injuries are reported.  
On the basis of the statistical data, the problems are discussed which are  
worthy of consideration and the better solution of which may lead to an im-  
provement in the results. 2 Hungarian, 6 Western references.

ZAJACZKOWSKA, J. Polski Instytut Przeciwwirusowy, Warsaw. Kilka uwag o szczepieniach przeciwgruźliczych BCG w Polsce Some notes on antituberculous (BCG) vaccinations in Poland Polski Tygodnik Lekarski, Warsaw 1949, 4/29-30 (909-911)  
Oral vaccination was mainly carried out in Poznan, where from 1928 to 1939 a total of 13,340 persons were vaccinated. In 1947 intradermal vaccinations began, with the assistance of the Danish Red Cross; in July 1948 the Joint Enterprise took over; by June 1949 about 3,500,000 persons had been examined, and of these about 50% had been vaccinated. As soon as the mass campaign is completed in one district, so-called 'permanent action', consisting of one mobile vaccinating team and one permanent centre within a central tuberculosis dispensary, is established in that district. Up to June 1949, 45 cases of local complications, and 62 cases of tuberculosis (including seven of tuberculous meningitis) had been reported among those vaccinated.
